

Prof. Eduardo Reck Miranda

Interdisciplinary Centre for Computer Music Research (ICCMR)
University of Plymouth, UK

<https://www.plymouth.ac.uk/research/iccmr>

- Ultra contemporary composer
- Working with AI since the 1980s
- Championed the development of Brain-Computer Music Interfaces
- Pioneered research into unconventional computing in music
- Pioneered the field of *Quantum Computer Music*

I am interested in programming and using actual quantum computers to compose music.

*I am **not so interested** in music that is simply inspired by quantum concepts, nor am I looking for poetic or philosophical parallels between quantum mechanics and musical composition.*

For me, music serves primarily as a form of human communication, rather than a metaphorical exploration of quantum mechanics or vice versa.

I see quantum computers as unprecedented musical instruments.

My focus is on harnessing the unique computational power of quantum mechanics (e.g., qubits, qutrits, qudits, superposition, entanglement and interference) to develop methods and build systems for the composition and performance of music in ways that might not have been possible with classical digital computers alone.

BBC Concert Orchestra

Jarvis Cocker

Queen Elisabeth Hall, South Bank Centre, London

Peter Gabriel

Brian Eno

Book launch at The Goethe Institute, London: <https://www.goethe.de/prj/lqs/en/eve/sou.html>

State of the art AI for music is great, but ...

- One-shot interaction; click & generate
- Makes it easy to create.
- Does not make it easy to be creative.
- Text-to-music oriented.
- Unfaithful to the submitted prompt; add extra descriptors the system is tuned to respond to.
- Inhibit critical engagement with compositional practice; e.g., no support for contemplation.
- Can lead to overreliance on AI, promoting downfall of problem-solving skills.

Opportunity to improve

- AI systems do not necessarily need to BE creative. But SUPPORT creative compositional practices.
- Music-to-music oriented
- Small-data, ephemeral, volatile machine learning

Artificial Intelligence today

New kinds of hardware = New kinds of intelligence

Exploring bio-computers ...

Neurons living on a silicon chip

Biocomputer Rhythms

A one-piano duet between a pianist and the bio-computer.

The score for the pianist is fixed, but the responses generated by the bio-computer are unpredictable.

2

4

depress cluster silently

at least 2 octaves, white keys

biocomputer solo with gentle pedal work

5 secs. 30 secs. 45 secs.

5

6

depress cluster silently

at least 2 octaves, black keys

BIOSET 3

BIOSET 4

BIOSET 4

BIOSET 5

BIOSET 5

BIOSET 5

The image displays a musical score for a one-piano duet. It consists of three systems of staves. The first system (labeled '4') shows a piano part with a cluster of notes and a biocomputer part with a solo. The second system (labeled '5') shows a piano part with a cluster of notes and a biocomputer part with a solo. The third system (labeled '6') shows a piano part with a cluster of notes and a biocomputer part with a solo. The score includes various musical notations such as notes, rests, and dynamic markings (p, mp, ff). It also features time markers (5 secs., 30 secs., 45 secs.) and labels for biocomputer sets (BIOSET 3, BIOSET 4, BIOSET 5). Instructions like 'depress cluster silently' and 'at least 2 octaves, white keys' are present. The piano part includes a cluster of notes and a biocomputer part with a solo.

Biocomputer Rhythms

This is “machine” intelligence that is far different from the pedestrian AI as we know it!

Quantum Computer

Rigetti

@ QuTech
Quantum Inspire

Is it be possible do design new kinds of AI with Quantum Computers?

- Using the principles of **quantum mechanics** to process information ...
- Using **quantum bits**, or **qubits**, to represent data ...
- Qubits can exist in a **superposition** of both 0 and 1 simultaneously
- Can be **entangled**: the state of one qubit can depend on the state of another.
- **Quantum interference**: Used to amplify correct results and cancel out incorrect ones. (Suitable for searching algorithms and logic problem solving.)

Quantum AI Method: Reservoir Computing

- Off-line batch processing with my own music for training the model (alter ego).
- On-line real-time interaction with the model for performing.
- Technically superior to the so-called RNN deep leaning.
- Not convinced. It produced good results, albeit in a rather convoluted fashion.

Procedural Generation with Partitioned Quantum Cellular Automata

Ran for 50 cycles, 80,000 shots per cycle on IBM hardware.

References: 12-tone series and transformation rows

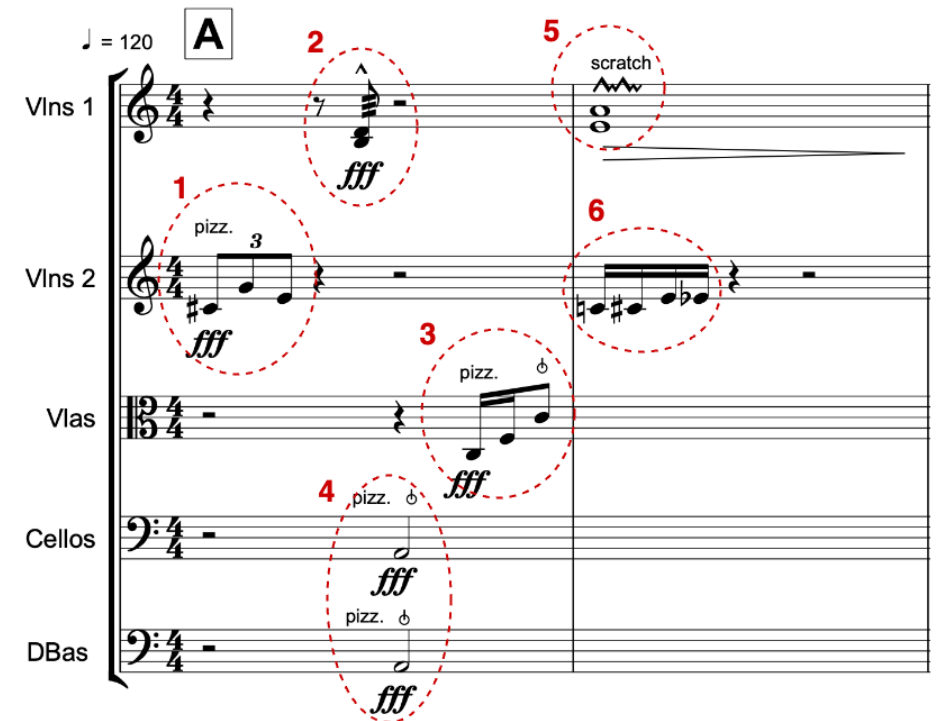

Raw outputs ...

A musical score for a string ensemble consisting of Violins 1, Violins 2, Violas, Cellos, and Double Basses. The score is in 4/4 time and features several measures with musical notation. Red dashed circles highlight specific musical elements, numbered 1 through 6. The numbers are placed as follows: 1 (Violins 1), 2 (Violins 2), 3 (Violas), 4 (Violins 1), 5 (Violins 2), and 6 (Violins 1). The notation includes various note values, rests, and dynamic markings.

Red dashed circles highlight specific musical elements, numbered 1 through 6. The numbers are placed as follows: 1 (Violins 2), 2 (Violins 1), 3 (Violins 2), 4 (Cellos), 5 (Violins 1), and 6 (Violins 2). The notation includes various note values, rests, and dynamic markings. A tempo marking of $\text{♩} = 120$ is present. A rehearsal mark 'A' is located at the beginning of the score. The word 'pizz.' (pizzicato) is written above the notes in measures 1, 3, and 4. The word 'scratch' is written above the notes in measure 5. The dynamic marking *fff* (fortississimo) is present in measures 1, 2, 3, 4, and 5.

PhD Quantum Computing in the Arts, Music and Humanities

Duration	Full time: 2-4 years Part time: 4-8 years
Course type	Full-time, Part-time route available
Study location	Plymouth

[Register for open evening](#)

[Apply now](#)

Studying this PhD will immerse you in a world of pioneering research under the umbrella of the Interdisciplinary Centre for Computer Music Research. Our research activity ranges from developing new music technologies for musical creativity to enhancing health and well-being through music, arts, and culture. The ICCMR team is pioneering quantum computing in the arts, music, and humanities, and is well-networked with key players in the quantum computing industry and associated technologies.

Thank you!
